

EXECUTIVE SUMMARY:

- On site performance validation
- Electrical & Mechanical testing
- Generate semi-annual reports
- Recommend service tasks
- Scheduling repeat service and maintenance visits

PROJECT DESCRIPTION:

The Department of State project is a 31.2 kW grid-tied solar electric system which Aurora Energy installed in 2006. Aurora Energy continues to support a semi-annual service and maintenance contract for the system. Tasks at each visit include visual inspections of all system equipment, ground fault testing, I-V plotting, examination of mechanical connections and performing all service tasks required by equipment manufacturers. Findings during the visit are compiled into a report that is reviewed by EMCOR Government Services, manager of O&M services for the building.

Department of State

Service & Maintenance

TITLE AND LOCATION:

Solar Array Feasibility Study and Installation, Washington, DC

PROJECT OWNER:

EMCOR Government Services

COMPLETION DATE:

Most Recent Visit: October 2012
